Education

Ph.D. in Economics, CERGE-EI, Prague *Exp. defense: Fall 2026*

Awarded as joint U.S. and Czech doctoral degrees.
Dissertation: *Essays in Experimental Economics*.

Research stay at the University of Chicago: joined John List's group, Sept 2023 – Mar 2024.
Research stay at Princeton University, Oct 2023

M.A. in Economics and Econometrics, CERGE-EI, Prague (U.S. degree) *2020*
M.A. in Economics, Armenian State University of Economics (ASUE), *summa cum laude* *2018*
B.A. in Economics, Armenian State University of Economics (ASUE), *summa cum laude* *2016*

Can Plausible Errors Provide Cover for Racial Discrimination? Latest version

Abstract: In this study, I ask whether ambiguity in a decision environment can provide moral cover for racial discrimination. The study is motivated by the idea that discriminatory preferences may not be expressed when people cannot easily justify acting on them. Ambiguity can provide a plausible non-discriminatory reason for biased behavior. I conducted a preregistered, incentivized experiment with 4,327 White U.S. participants who allocated real monetary bonuses to actual recipients. The experiment varied whether the ambiguously described payoff option benefited a Black recipient or a White recipient. This design enables me to distinguish between a general tendency to avoid ambiguously framed options and the selective use of ambiguity as a justification for discrimination. The results do not support the hypothesis that ambiguity provides moral cover for discrimination in the full experimental sample. Participants choose the ambiguously framed option more often when it benefits the Black recipient than when it benefits the White recipient,

the opposite of what the selective use of ambiguity against Black recipients would predict. Overall, the evidence is more consistent with a general tendency to avoid ambiguously framed options than with ambiguity serving as moral cover for racial discrimination.

Working Papers

Sexual-Orientation Discrimination and Biological Attributions: Experimental Evidence from Russia

Pre-registered online experiment with Russian adults ($n = 2{,}110$), using incentivized allocation tasks. The sample was quota-matched by age and gender. Attribution theory predicts that presenting sexual orientation as innate should reduce discrimination. Contrary to the pre-registered hypothesis, exposure to scientific evidence for biological explanations of homosexuality *increased* discriminatory behavior. In intolerant contexts, information provision may exacerbate the behavior it is intended to reduce.

Religious Identity and Sexual-Orientation Discrimination: Experimental Evidence from Russia

Randomized online experiment ($n = 2{,}093$) varying whether participants answer religion-related questions before or after incentivized allocation decisions and LGB-related policy questions. Participants allocate significantly less to same-sex than to different-sex profiles, and more religious respondents report less policy support. The religious prime itself has no statistically robust average effect. The paper adds causal evidence to a literature that has relied largely on correlations, and delimits what this class of priming intervention can achieve.

Teaching

Teaching Assistant, Experimental Economics, Graduate (Ph.D. level), CERGE-EI *2023-2024*
Experimental design and Qualtrics, including JavaScript integration. Avg. Evaluation: 4.75/5

Main Instructor, Applied Statistics, Statistics, Armenia. ASUE, Armenia *2022-2024*
Mentored 50+ students in applied statistics and experimental research. Avg. Evaluation: 4.79/5

Experience

Data Scientist, Absa Technology, Prague *May 2026 – present*
Observational causal inference and experimentation

Data Analyst, Absa Technology, Prague *Sept 2024 – May 2026*

Doctoral Researcher/ PhD candidate, CERGE-EI, Prague *Sept 2023 – Dec 2025*

Research Assistant, CERGE-EI, Prague *Sept 2019 – Dec 2023*

Student Assistant, University of Zurich, Remote *Feb 2019 – May 2019*
